ARGUS

Integrated Security Management and Monitoring System

ABOUT ARGUS

ARGUS is a system developed by Brasília Segurança with the purpose of managing and monitoring integrated surveillance systems, which include concurrent services of security and fixed and mobile human surveillance, working in parallel with cutting-edge technology in the areas of video monitoring, alarms, and access control.

The application was developed to address a wide range of needs in daily surveillance and management operations, bringing modern, visual, and intuitive concepts to its interface. It facilitates interoperability between human and digital elements, creating a fully digitalized operation, significantly reducing—or even eliminating—the need for paper or complementary systems.

Operation and Monitoring Module

Key Features:

- Interactive map with georeferencing of units and real-time GPS tracking of vehicles;
- Alarms organized using the Kanban concept to facilitate operator control;
- Ability to arm and disarm alarms with a single click;
- Integration with surveillance cameras allowing the operator to view the area before dispatching mobile patrols;
- Opening of service calls to mobile patrols via the main screen, featuring distance display of available patrols to the unit;
- Management of technical service calls with work order creation and personnel management.

BRASÍLIA

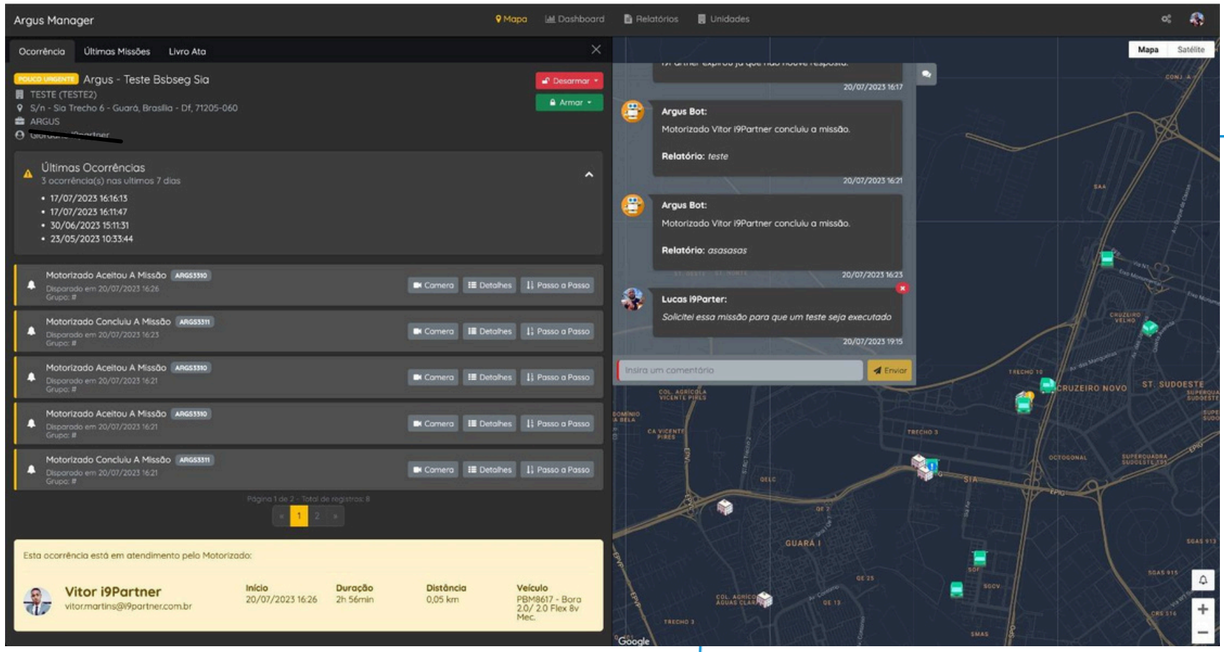
Interactive Map

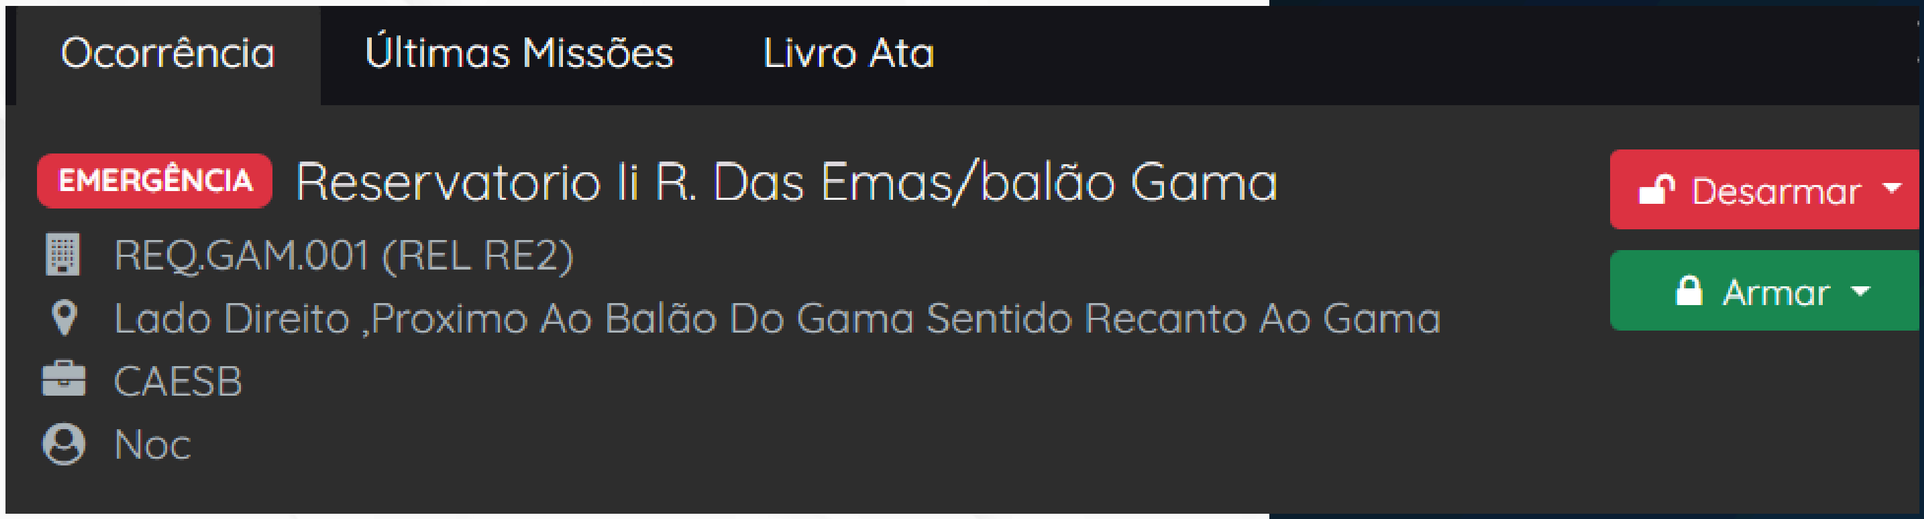
Interactive map with georeferencing of units and real-time vehicle GPS, featuring alarms organized in a Kanban layout to facilitate operator control.

In addition to alarm identification, it allows preliminary perimeter verification and opening of service calls to technicians or mobile security guards directly through the incident card.



Alarms

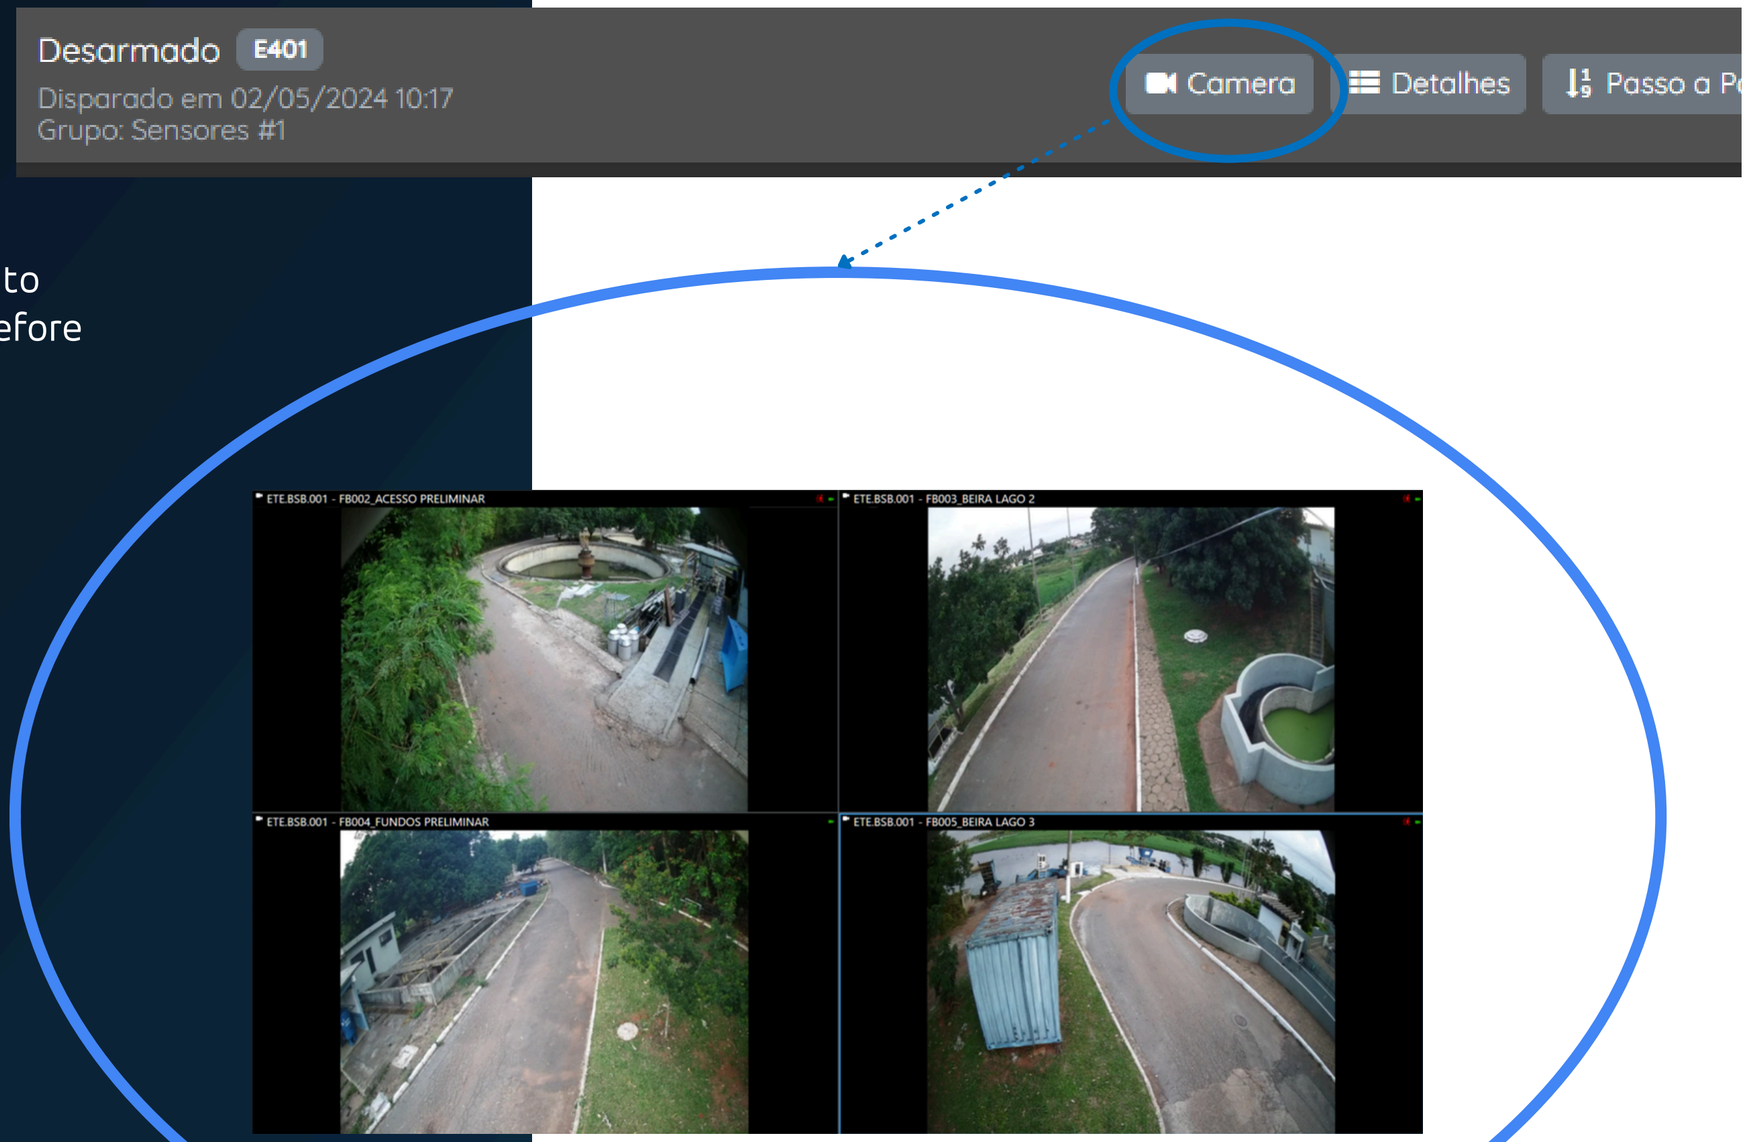
Ability to arm and disarm alarms with just one click.



BRASÍLIA
segurança s/a

Cameras

Integration with surveillance cameras to allow the operator to view the area before dispatching mobile patrols



BRASÍLIA
segurança s/a

Service Calls

Opening service calls to mobile patrols through the main screen, with a feature that shows the distance of available patrols to the unit.

SECURITY GUARD

Surveillance Module

BRASÍLIA
segurança s/a

Surveillance Module

Key Features:

- Identification, opening, and closing of shifts with photographic records and vehicle check-outs.
- Receipt of missions via app with audible alarms and identification of point, distance, description, and map to the location, including options to accept or reject the mission.
- Mission logging with photos and audio, automatically transcribed by the system.
- Applicable to Fixed and Mobile Surveillance.
- Recording of shareable reminders with all other members of the route.
- Vehicle report, with the option to register incidents through photos and audio with automatic system transcription.
- Incident report, with options for registration through photos and audio with automatic transcription, as well as unit identification.

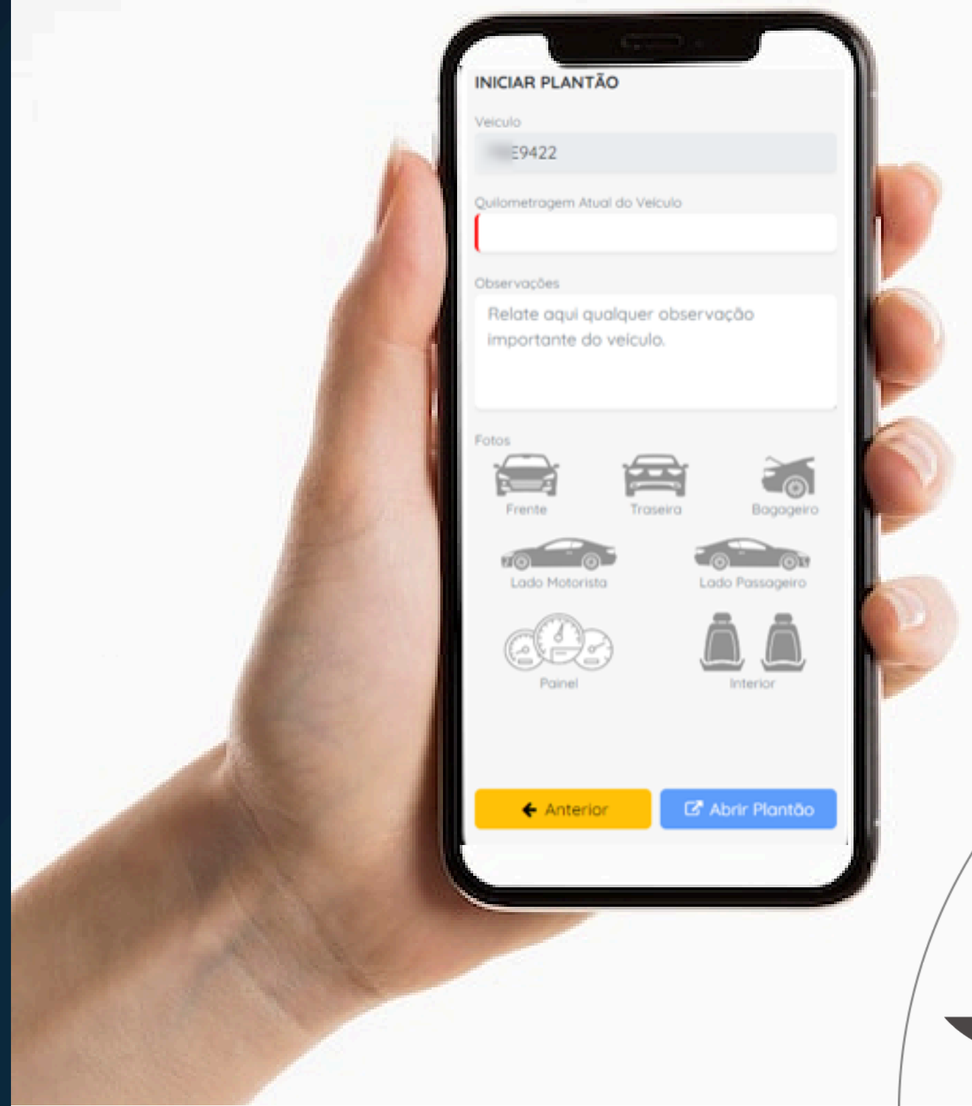
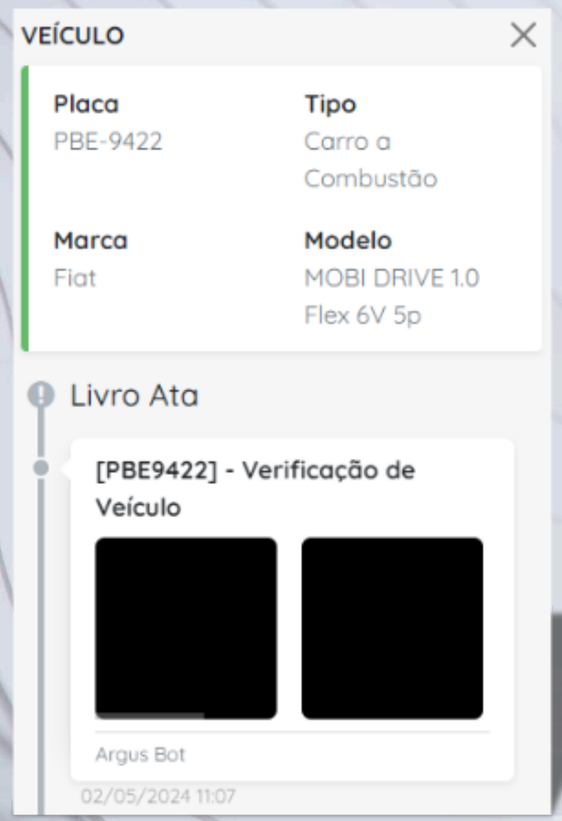
Vehicle Management and Registration

Identification, opening, and closing of shifts with photographic records and vehicle check-out and return.

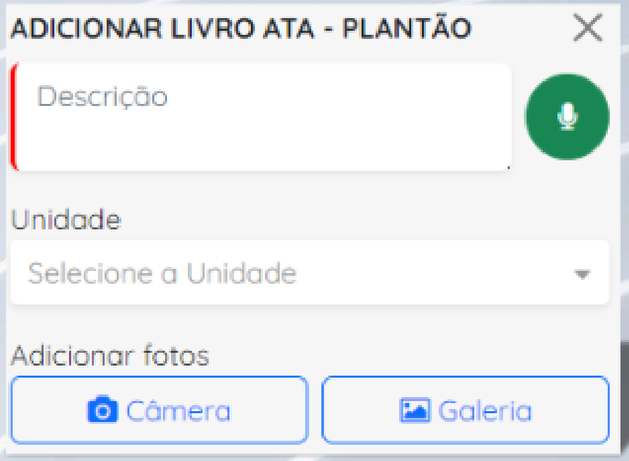


BRASÍLIA
segurança s/a



Reports

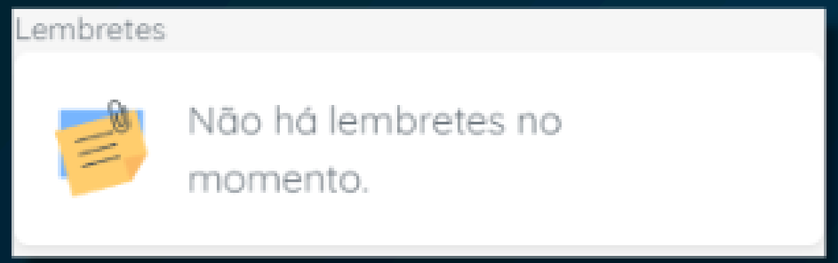
Vehicle and Incident Reports, individualized with options to record via photos and audio, automatically transcribed by the system.



BRASÍLIA segurança s/a

Reminders and Missions

Receipt of missions via app with audible alarm and identification of point, distance, description, and map to the location, including options to accept or reject the mission.



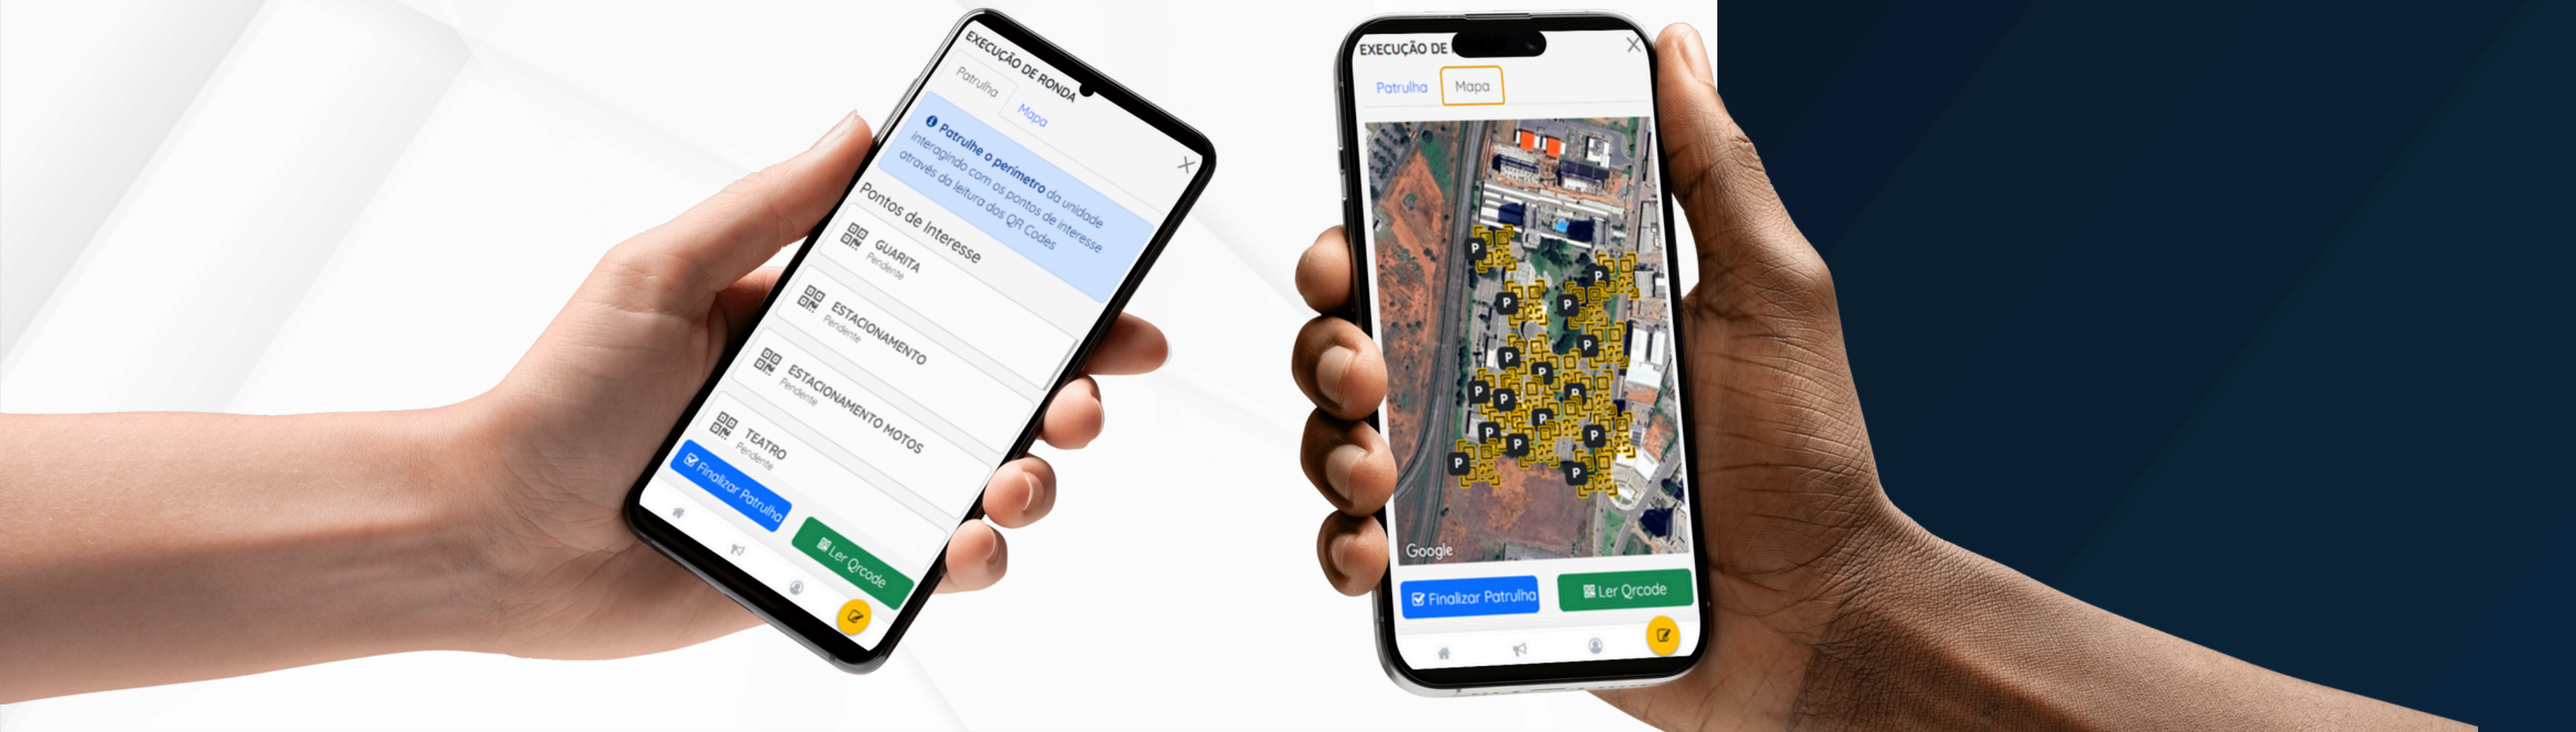
Recording of reminders shareable with all other members of the route.

BRASÍLIA
segurança s/a

QR Code Scanning

The security guard can also scan QR Codes defined by the client, allowing the recording of date, time, and location for each visit made.

The app also allows verification through an interactive map showing the exact location of each point defined by the client.



03 SUPERVISOR

Supervision Module

BRASÍLIA
segurança s/a

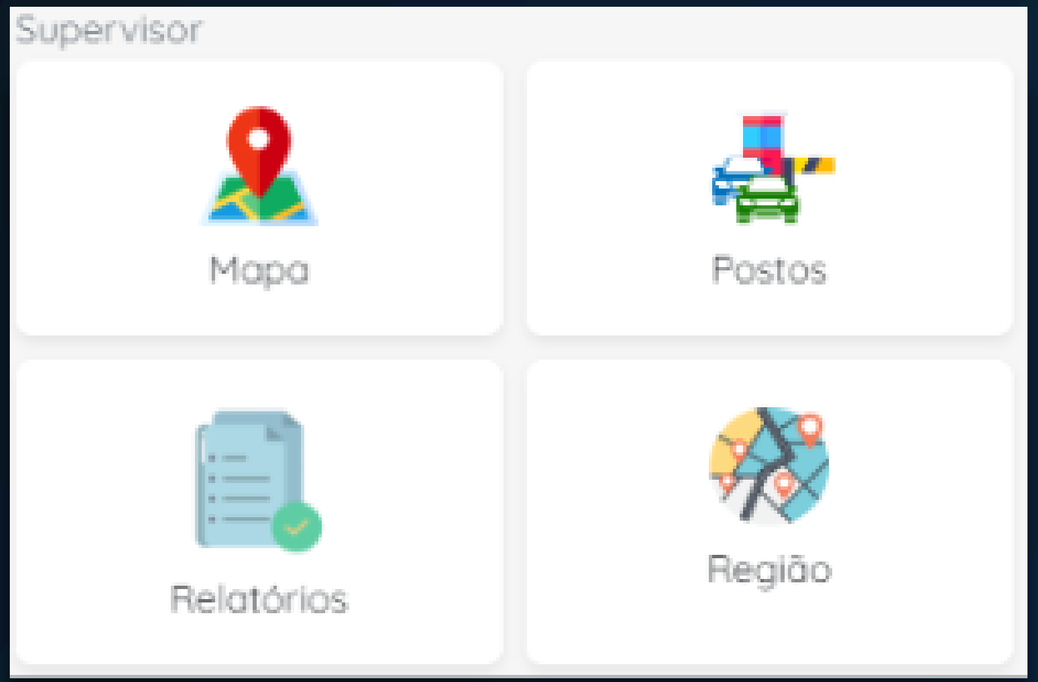
Supervisor Module

Key Features:

- All functionalities of the SECURITY GUARD module;
- Access to the full map with georeferencing of all units in the region;
- Access to data for each logged mobile patrol or fixed post, including information on the last mission, post details, current shift, and summary of shifts, missions, and distance traveled in the last 21 days;
- Detailed reports on missions, shifts, vehicles, and event notifications, with the possibility of customized filtering;
- Consolidated logbook for the region with records of inspections carried out by all posts within the supervision area, including access to photographic records.

BRASÍLIA
segurança s/a

Supervision Features



Exclusive Functions:

- Map with marked units in the supervised region;
- Lists of posts in the supervised region;
- Detailed reports of missions, shifts, vehicles, and event notifications;
- Consolidated logbook of the region with records of inspections carried out, including access to photographic records.

ADMINISTRATOR

Administration Module

Administration Module

Key Features:

- Interactive dashboards displaying key control points with information on alarms, mobile patrols, service calls, and monitoring;
- Generation of various reports such as alarms, incidents, shifts, missions, patrol executions, vehicles, and arming/disarming, with filtering options and export capabilities;
- Units tab listing registered points, allowing inclusion of site photographs;
- Regions tab with visual maps of created locations, featuring geolocation and point counts;
- Comprehensive data management enabling registration and modification of monitoring centers, units, equipment, users, alarm types, vehicles, shifts, regions, and more.

EXTERNAL MANAGEMENT
Module

Key Features:

- Interactive dashboard displaying key control points with information on alarms, incidents, monitoring, including counts and response times;
- Interactive general map with all georeferenced units, including color coding to visually identify the status of incidents in real time;
- Dedicated tab for submitting requests to the contractor, including the ability to attach files;
- Contacts tab listing all contacts defined by contract management, with fields for email and phone;
- Ability to create customized routes for mobile patrols;
- Registration of points for QR Code scanning.

Route Creation

Allows the client to assign the visit route to be carried out by the mobile patrol team, establishing the sequence and frequency of visits for each shift. It is also possible to define the duration of each visit or time spent at a support base.

While setting up the route, the system automatically calculates the travel time for each added unit and provides an estimated duration for the completion of the entire defined route.

BRASÍLIA
segurança s/a

Scan Points

ARGUS allows the client to define, within their units, the critical points to be inspected during patrols.

With this setup, during each visit, the security guard checks each point, ensures everything is in order, and scans the QR Code to record the date, time, and location of the visit.
